EDUCATION

August 2019 - May 2023

B.S., Carnegie Mellon University

Pittsburgh, PA

- Major(s): Computer Science, Statistics and Machine Learning
-

SKILLS

- Python, Java, C++, SQL, C, Javascript/Typescript, React, NodeJS, Hack, Linux, AI/Machine Learning
-

EXPERIENCE

Software Engineer, Meta, New York City, NY

November 2023 - Present

- Coordinated project workstream across 5+ teams to productionize embedding streaming support for SoTA ranking models (<5min) refresh rate, supporting scalable AI model serving across diverse hardware types and regions (C++)
- Eliminated recurring streaming configuration issues through purposeful redesign, resolving problems that previously impacted 300+ production models
- Enhanced control plane reliability by implementing robust error handling of new features and augmented self-service observability experience by surfacing actionable metrics to users (C++, React), which decreased manual escalations by 42% and reduced time-to-detection in 4+ SEVs
- Orchestrated cross-functional collaboration across legal, policy, engineering, PMs, and privacy stakeholders to ensure technical compliance in exemption carveout policies for successful EU launch, leveraged system domain expertise for pinpointing implementation gaps identified from meticulously interpreting ambiguous privacy requirements
- Spearheaded Unlink SLA program stability (15-day data unlinking guarantee), reducing technical issues from 3+ weekly to <1 monthly through improved investigations and engineering practices (Python)

Software Engineer, Atlassian, New York City, NY

July 2023 - November 2023

- Redesigned product identification logic for targeted ad-tracking on main website to accurately tag potential customers
- Architected modularized menu content and complex interactions for revamped global navigation bar, deployed to 100% of users on www.atlassian.com (Typescript, React)
- Extended framework for request/parameter-passing through application layers to AWS storage (Typescript)
- Accelerated team velocity by componentizing reusable website library components and providing prompt code reviews
- Cultivated supportive culture by sharing learnings from personal enrichment deep-dives to help unblock peers

Software Engineer Intern, Meta, New York City, NY

May 2022 - August 2022

- Enabled end-to-end multi-workflow analytics comparison functionality on ML workflow observability tool, accelerating 4+ SEV investigations by 2x by internship end (Hack, React, Python)
- Initiated customer discussions and gathered feedback to independently redesign project plan with more effective solutions, delivering workflow comparison feature ahead of schedule
- Authored feature documentation, conducted knowledge-sharing via tech talks to partner teams, and mentored interns/team new hires on platform best practices
- Improved team efficiency by modernizing library components and implementing log filtering system to reduce team oncall-wide noise

Software Engineer Intern, Facebook, Menlo Park, CA

May 2021 - August 2021

- Introduced full-stack flexible testing feature for security policies guarding data resources enabling convenient permission testing for 50+ teams (Hack, React, Java)
- Led design discussion to resolve conflicting permission-checking effects from interactions among multiple sources
- Optimized onboarding and new security feature offerings documentation, achieving 80+ views per month for 4+ years

Software Engineer Intern, Intuit, Mountain View, CA

May 2020 - August 2020

- Delivered end-to-end cohort identification feature for QuickBooks price change tool (React, Redux, Java, DynamoDB)
- Increased code base test coverage from 70% to 80% through comprehensive unit testing
- Enhanced thoroughness of existing documentation and wrote documentation for new features
- Implemented Spark queries for automatic cohort identification of eligible customers for pricing plan change
